Paw Haven Rescue

Part 1:

In the first part of my website developing I created webpages that consisted of tags with content such as text, images, videos, navigation links and a map. I added background colours and a header logo. Lastly I added a footer with my student number as the footer.

Part 2:

In the second part of my website developing, I created CSS files for all of my webpages. I changed background colours suitable ones that matched. I added figure captions for the images.

Part 3:

In the third and final part of my website developing, I resolved the mobile responsiveness issue. I added the Hamburger menu feature. I created a JavaScript file. I added more pictures to the gallery. I used interactive elements. I resized the website's map. Lastly I created interactive forms for several webpages on the websites.
